## ComSci.....Press Release.....

### Two New Clients Now Rely on ComSci to Create Accountability, Modify Behavior, and Reduce Overall Technology Costs

**Edison, NJ, March 25, 2009** – ComSci, LLC, a leading provider of Technology Financial Management (TFM) solutions for IT cost transparency and chargeback, today announced that two new clients – a large semiconductor manufacturer and a major university medical center – are using ComSci’s TFM solution to clarify their technology and telecommunications expenses.

“More and more organizations are realizing that implementing a cost transparency solution will save money,” said Robert Svec, President and CEO of ComSci. “By making business units accountable for their IT expenses, organizations can drive behavioral changes in how technology and telecommunications are used, which ultimately lowers costs.”

The semiconductor manufacturer joins a large number of other technology companies as a ComSci client. ComSci was selected because it offered significantly better value than the company’s existing solution. ComSci was able to handle data, in a timelier and more accurate manner. This greater functionality and flexibility enables the company to identify more cost savings, drilling into the summary-level information to see specific trends and opportunities for savings. The semiconductor manufacturer has begun with [WirelessVisibility™](#) for its three main wireless vendors. Pagers, calling cards, and audio conferencing will be added shortly.

“Transparency can start from anywhere in a company,” commented Svec. “In some companies, it starts with telecommunications, while in others it starts with desktop or distributed servers. Many of our clients end up implementing transparency across all IT products and services. Providing transparency to create accountability saves money, no matter what the technology.”

The medical center, for example, chose ComSci because it had the flexibility to handle both telecommunications and technology for transparency and chargeback. ComSci is initially handling the medical center’s call accounting for both traditional PBX and Cisco VoIP locations, pagers, [WirelessVisibility™](#), audio conferencing, and other telecom charges. This involves the collection, pricing, chargeback and web-based delivery of all voice related services to business unit managers within the medical center.

After the initial implementation of charging back all telecom-related services, the hospital will begin incorporating all other technology-based products and services on to ComSci’s [BillBrowser™](#) solution. [BillBrowser™](#) is ComSci’s web-based One Technology Bill and Reporting Tool for Business managers and Controllers to analyze all IT charges through a single web-based portal.

The medical center joins a number of other hospitals and large healthcare providers in using ComSci, giving ComSci in-depth experience in handling the complex technology and telecommunications environments found in healthcare.

#### **About ComSci**

ComSci delivers Technology Financial Management solutions that empower organizations to implement more effective IT financial governance. Through decades of experience and a suite of web-based tools, ComSci helps IT organizations enhance IT cost transparency and visibility, which in turn enables business units to understand and optimize demand and utilization of technology resources. ComSci is headquartered in Edison, New Jersey, and was founded in 1971. Visit [www.comsci.com](http://www.comsci.com) for further information.
