Major Metropolitan Cancer Research Center and Hospital Selects ComSci ComSci Develops Flexible TEM Solution to Address Hospital's Requirements

Edison, NJ - June 19, 2007 ComSci, a leading provider of IT financial management solutions, has signed an agreement with a Major Metropolitan Cancer Research Center and Hospital to deliver a suite of **Technology Expense Management** services and solutions. The hospital was looking for a fully integrated solution that will assist them through the TEM lifecycle - service requests, work orders, inventory management, and technology chargeback to replace their incumbent call accounting service and software vendor.

For the hospital, the TEM lifecycle will start with ComSci's web-enabled **Service Request Module**. The Service Request Module provides a solution to centrally request moves, adds, changes, and disconnects for a wide array of telecom and technology products and services. The requests generated from the Service Request Module will then be automatically loaded into ComSci's web-enabled **Work Order Module**. Our clients will be able to submit and track telecom orders with Vendors, manage company policies around the procurement of technology services, and improve vendor management and SLA enforcement.

The hospital will also utilize ComSci's **Inventory Management Module** to maintain its inventory of lines and equipment. The integration of ComSci's web-enabled Service Request, Work Order and Inventory Management application makes it easy for clients to develop and manage an ongoing accurate inventory as services and equipment are ordered, installed and removed.

ComSci will also provide the hospital with their **Technology Chargeback Services**. ComSci will provide the collection, pricing and web-based delivery of all voice related services (e.g., local, long distance, wireless, audio/video conferencing, etc) to business unit managers within the hospital. ComSci's platform was chosen by the hospital because of its ability to chargeback all Technology services. After the initial implementation of charging back all voice related services, the hospital will begin incorporating all technology-based products and services on to ComSci's BillBrowser solution. Bill Browser is ComSci's web-based One Technology Bill and Reporting Tool for departmental managers and controllers to analyze all IT charges through a single web-based portal.

In addition to the integrated solutions provided by ComSci, the hospital chose ComSci because of their ability and commitment to deliver tailored solutions that address their client's pain points. A prime example of this was the hospital's current TEM vendor provided a fragmented application that required multiple logins and passwords. This burden of password maintenance and difficulty of use was addressed through ComSci delivering its application as an LDAP compliant solution allowing users to access their information through a Single Sign-on from their Corporate Intranet.

"Although many in this marketplace like to talk about 'revolutionizing the industry', ComSci is different - we listen to our clients, understand their requirements and deliver products and solutions that are configurable and adaptable to their environment." said Michael Siniscalchi, ComSci's Vice President of Business Development.
