

## **ComSci Partners with Connectria Hosting to Provide Customers with Award-Winning IT Financial and IT Business Management Applications through the Cloud**

*- Solution Enables ComSci to Deliver IT Financial and IT Business Management Solutions that meet Customers' Stringent Data Security and Compliance Requirements -*

**ISELIN, N.J. December 19, 2011** - ComSci, the award-winning [technology financial management](#) solutions company, announced today details of its partnership with Connectria Hosting, a global [managed data infrastructure hosting](#) company. The two companies have joined forces to provide ComSci's SaaS-based IT financial and business management applications to more than 57,000 users through Connectria's cloud-based data hosting capabilities. By partnering with Connectria, ComSci is able to provide its clients with highly secure cloud-based SaaS solutions for automating complex IT financial cost modeling, budget and forecasting, and demand management processes.

Rather than devote company resources to develop a large-scale in-house data storage system, ComSci sought a robust, managed infrastructure cloud provider to host and manage their clients' confidential data. Connectria's cloud-based data solutions were able to support ComSci's large-scale operations and meet the security compliance demands of their customers.

Today, all of ComSci's client-facing SaaS-based applications are hosted on multiple Connectria data centers. As ComSci anticipates further growth, it will continue to rely on Connectria to provide its customers with award-winning IT finance applications and state-of-the-art infrastructure.

"Connectria's customer focus resonated with us because it matched the way we do business with our customers, and it made us feel confident in choosing a cloud provider with these same values," said Lou Takacs, chief information officer for ComSci. "Our priority is providing comprehensive IT financial management and business management solutions – not building and hosting data centers. Connectria enables us to focus on our core business and is flexible in allowing us to configure our systems and infrastructure exactly the way we want them for our customers, delivering the data security and compliance they need."

"We're pleased that ComSci selected Connectria as its hosting partner," said Scott Azzolina, Connectria vice president of Marketing. "Connectria provides ComSci clients with a secure, robust cloud-based SaaS solution that quickly scales with demand. We hope to continue our relationship with ComSci for years to come."
