Top Consumer Magazine Publisher Selects ComSci to Provide WirelessVisibility™ Services

ComSci to provide suite of Technology Chargeback Solutions to Leading Magazine Publisher

Edison, NJ - May 28, 2008

Wireless costs are a significant expense for most prominent corporations in today's business world. Recently, a leading consumer magazine and website publishing company chose to take action to bring this spending down, while increasing visibility and accountability for these costs among their employees. To better manage, control and understand their wireless expenses, the publisher selected ComSci to provide their WirelessVisibility™ solution. By streamlining and clarifying accounts of wireless usage and costs, ComSci's solution will allow the publishing company to reconcile inventory, optimize rate plans while also providing the ability to track and monitor wireless expenses at the individual or department level. As they expand their service options and take advantage of ComSci's full Technology Chargeback and Transparency Solution, the publishing company will have visibility into ALL their IT Products and Services. ComSci's Technology Chargeback and Transparency Solution will not only provide visibility into wireless expenditures but also provide business units with a "one bill" covering ALL technology services (e.g. mainframe, distributed services, desktop support services, telecommunications, etc.)

ComSci's WirelessVisibility™ service will help the client understand the drivers associated with their wireless expenses. This robust solution provides analytical reports with essential information such as spend per device, cost per minute, international roaming charges, and other wireless cost data. In addition, ComSci will be delivering BillBrowser™, a web-based tool that provides business unit managers with key insights to better manage their wireless expenses and give them visibility into end-user and department statistics to assist them in controlling wireless consumption and costs.

As a dominant force in the magazine publishing industry, ComSci's newest client always seeks to maintain a competitive edge in publishing, and their desire to maintain that edge when it comes to wireless visibility and consumption management comes as no surprise. At a time when wireless costs are skyrocketing due to increases in wireless devices, changing plan and rate structures, the development of new technologies, the increase in demand for international services, and the prevention of misuse, companies depend on ComSci to make their options clear and maximize their Technology Financial Management abilities. "We are excited about our new relationship with this well-recognized publishing firm," said Bob Svec, ComSci's President & CEO. "In addition to the value that we will provide them with our WirelessVisibility™ solution, it is our unique platform and capabilities in providing a single view into all technology products and services that became the true differentiator for them."

About ComSci

ComSci delivers Technology Financial Management solutions that empower organizations to implement more effective IT financial governance. Through decades of experience and a suite of web-based tools, ComSci helps IT organizations enhance technology transparency and visibility, which in turn enables business units to understand and optimize demand and utilization of technology resources. ComSci is headquartered in Edison, New Jersey, and was founded in 1971. Visit our [Corporate Website](#) for further information.
